

**If I get more time then following things I can do it,**

- I can cover more functionality,
- I can write additional effective and efficient test cases for better test coverage
- I can find more bugs,
- I can refining tests,
- As per requirement, I can enhance my current framework by incorporating newly learned tools and technologies.
- I can test it with Python Behave (BDD) framework tool.
- In the last I do perform exploratory testing rather than writing exhaustive test cases.
